Profile

I am a backend developer specializing in building scalable, high-performance web applications. With expertise in **Node.js**, I focus on designing efficient backend architectures and developing RESTful APIs. I have experience working with **databases like MongoDB and MySQL**, optimizing performance, and ensuring robust security through authentication and encryption. I also integrate **AWS services** into my workflow for cloud hosting and deployment. My goal is to create seamless, reliable, and efficient backend systems that enhance the overall functionality and user experience of web applications.

Education

Bachelors of Engineering at,
International Institute of Information Technology
Sep 2024 – Present ⚲ Pune

11th and 12th Boards at,
Modern College of Arts, Commerce and Science
Sep 2022 – Mar 2024 ⚲ Pune

Skills

NodeJS

I develop scalable and efficient backend applications using **Node.js**, leveraging its event-driven architecture for high-performance web services. With **Express.js**, I design RESTful APIs, handle authentication, and optimize server-side logic for seamless application functionality.

SQL & NoSQL Database

I develop scalable and efficient backend applications using **Node.js**, leveraging its event-driven architecture for high-performance web services. With **Express.js**, I design RESTful APIs, handle authentication, and optimize server-side logic for seamless application functionality.

Amazon Web Services

I integrate **AWS services** into my development workflow for cloud hosting, storage, and scalability. Utilizing services like **EC2, S3, and RDS**, I ensure secure and efficient deployment of web applications.
